Explore some remarkable projects below.

# Portfolio

We deliver strategic, high-performance solutions that turn complex healthcare data into measurable outcomes. From real-time mixed reality integrations to end-to-end data pipelines, our work—such as the Mixed Reality Desktop Application at Vidhan Sabha, Lucknow—exemplifies how innovative tech can drive meaningful impact in healthcare systems.

Web application

# Portfolio

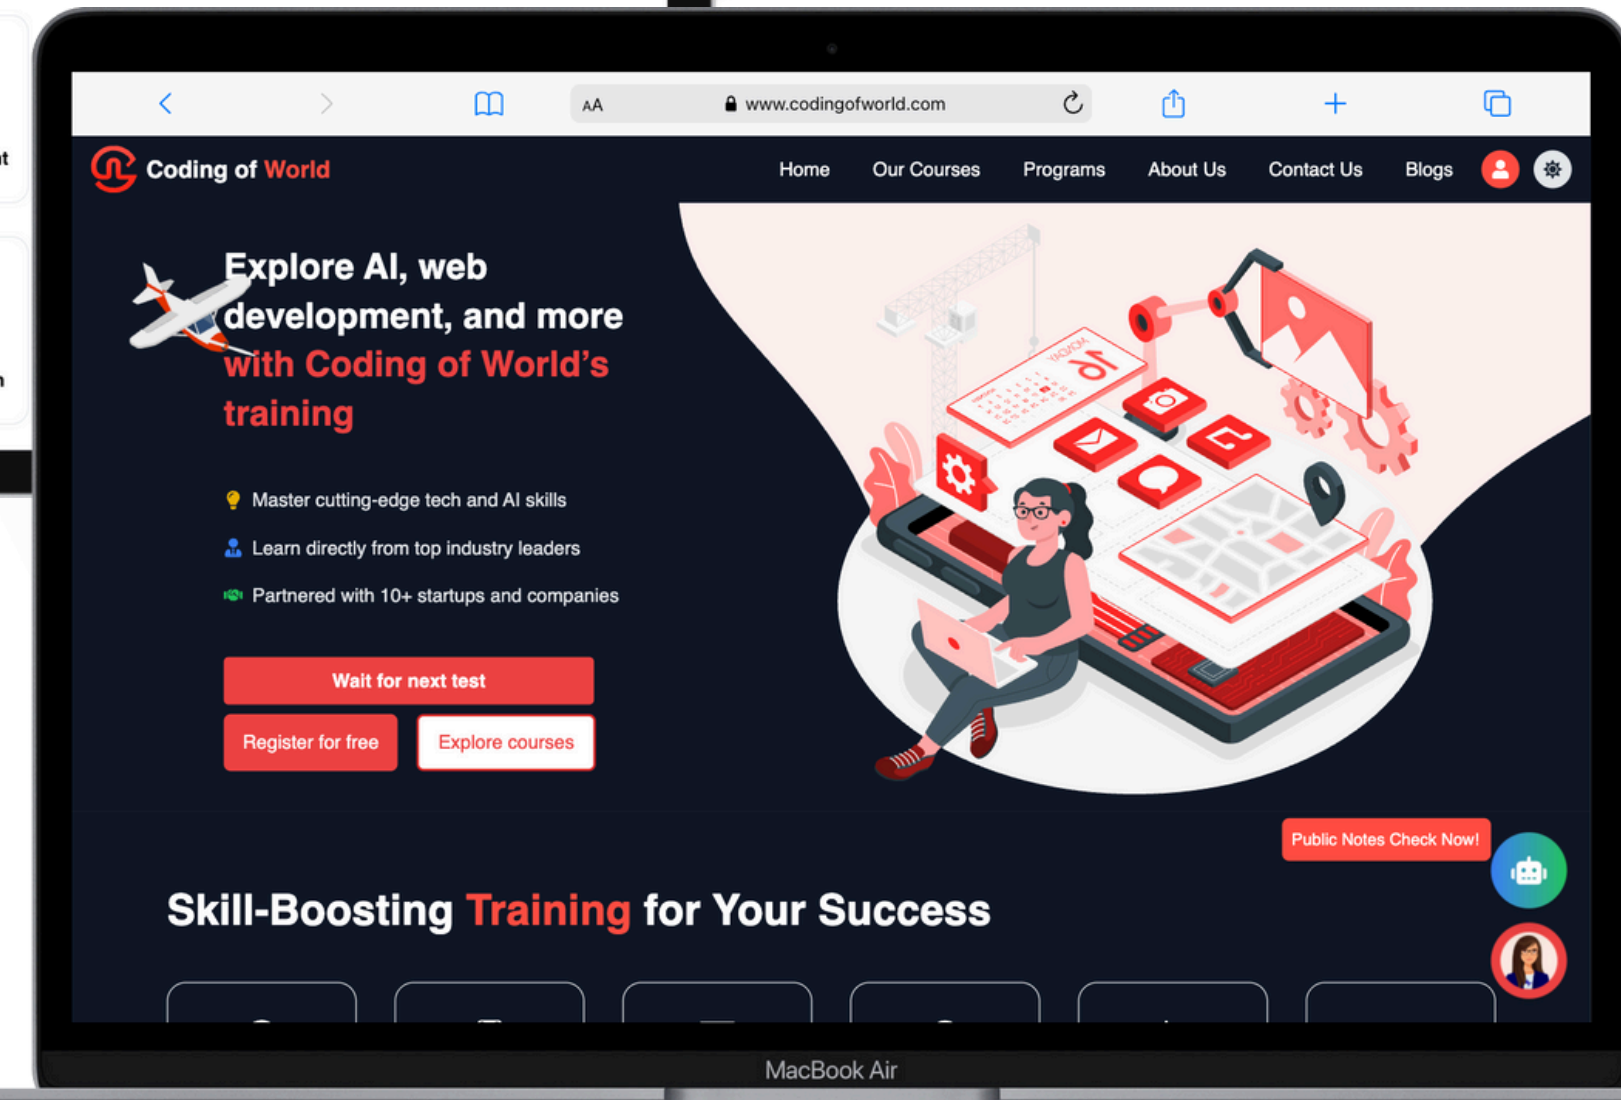

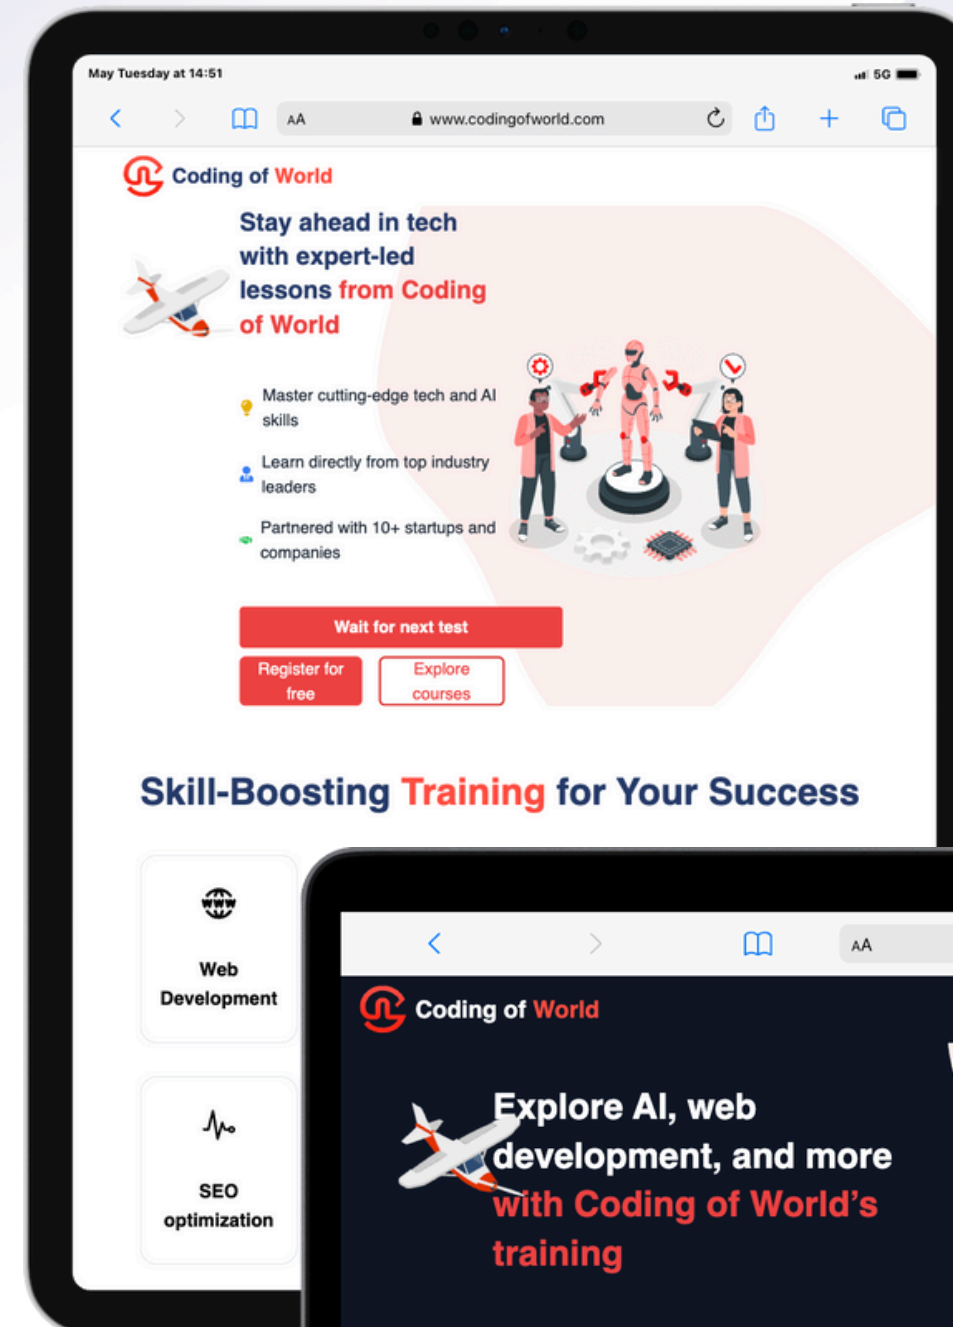

At Coding of World, we equip students and professionals with real-world skills through immersive internships, hands-on training, and expert-led apprenticeship programs. From web and mobile development to AI, ML, and robotics, our mission is to bridge the gap between education and industry. With access to 10,000+ online courses and guidance from seasoned professionals, we're shaping future-ready talent for tomorrow's tech landscape.

This project involved

- Full-stack website development
- Scalable and secure database structuring
- Website hosting with a focus on performance and security
- Workforce upskilling through hands-on exposure to modern tech stacks

Web Application

# Portfolio

## Jane CJ (Mobile Application)

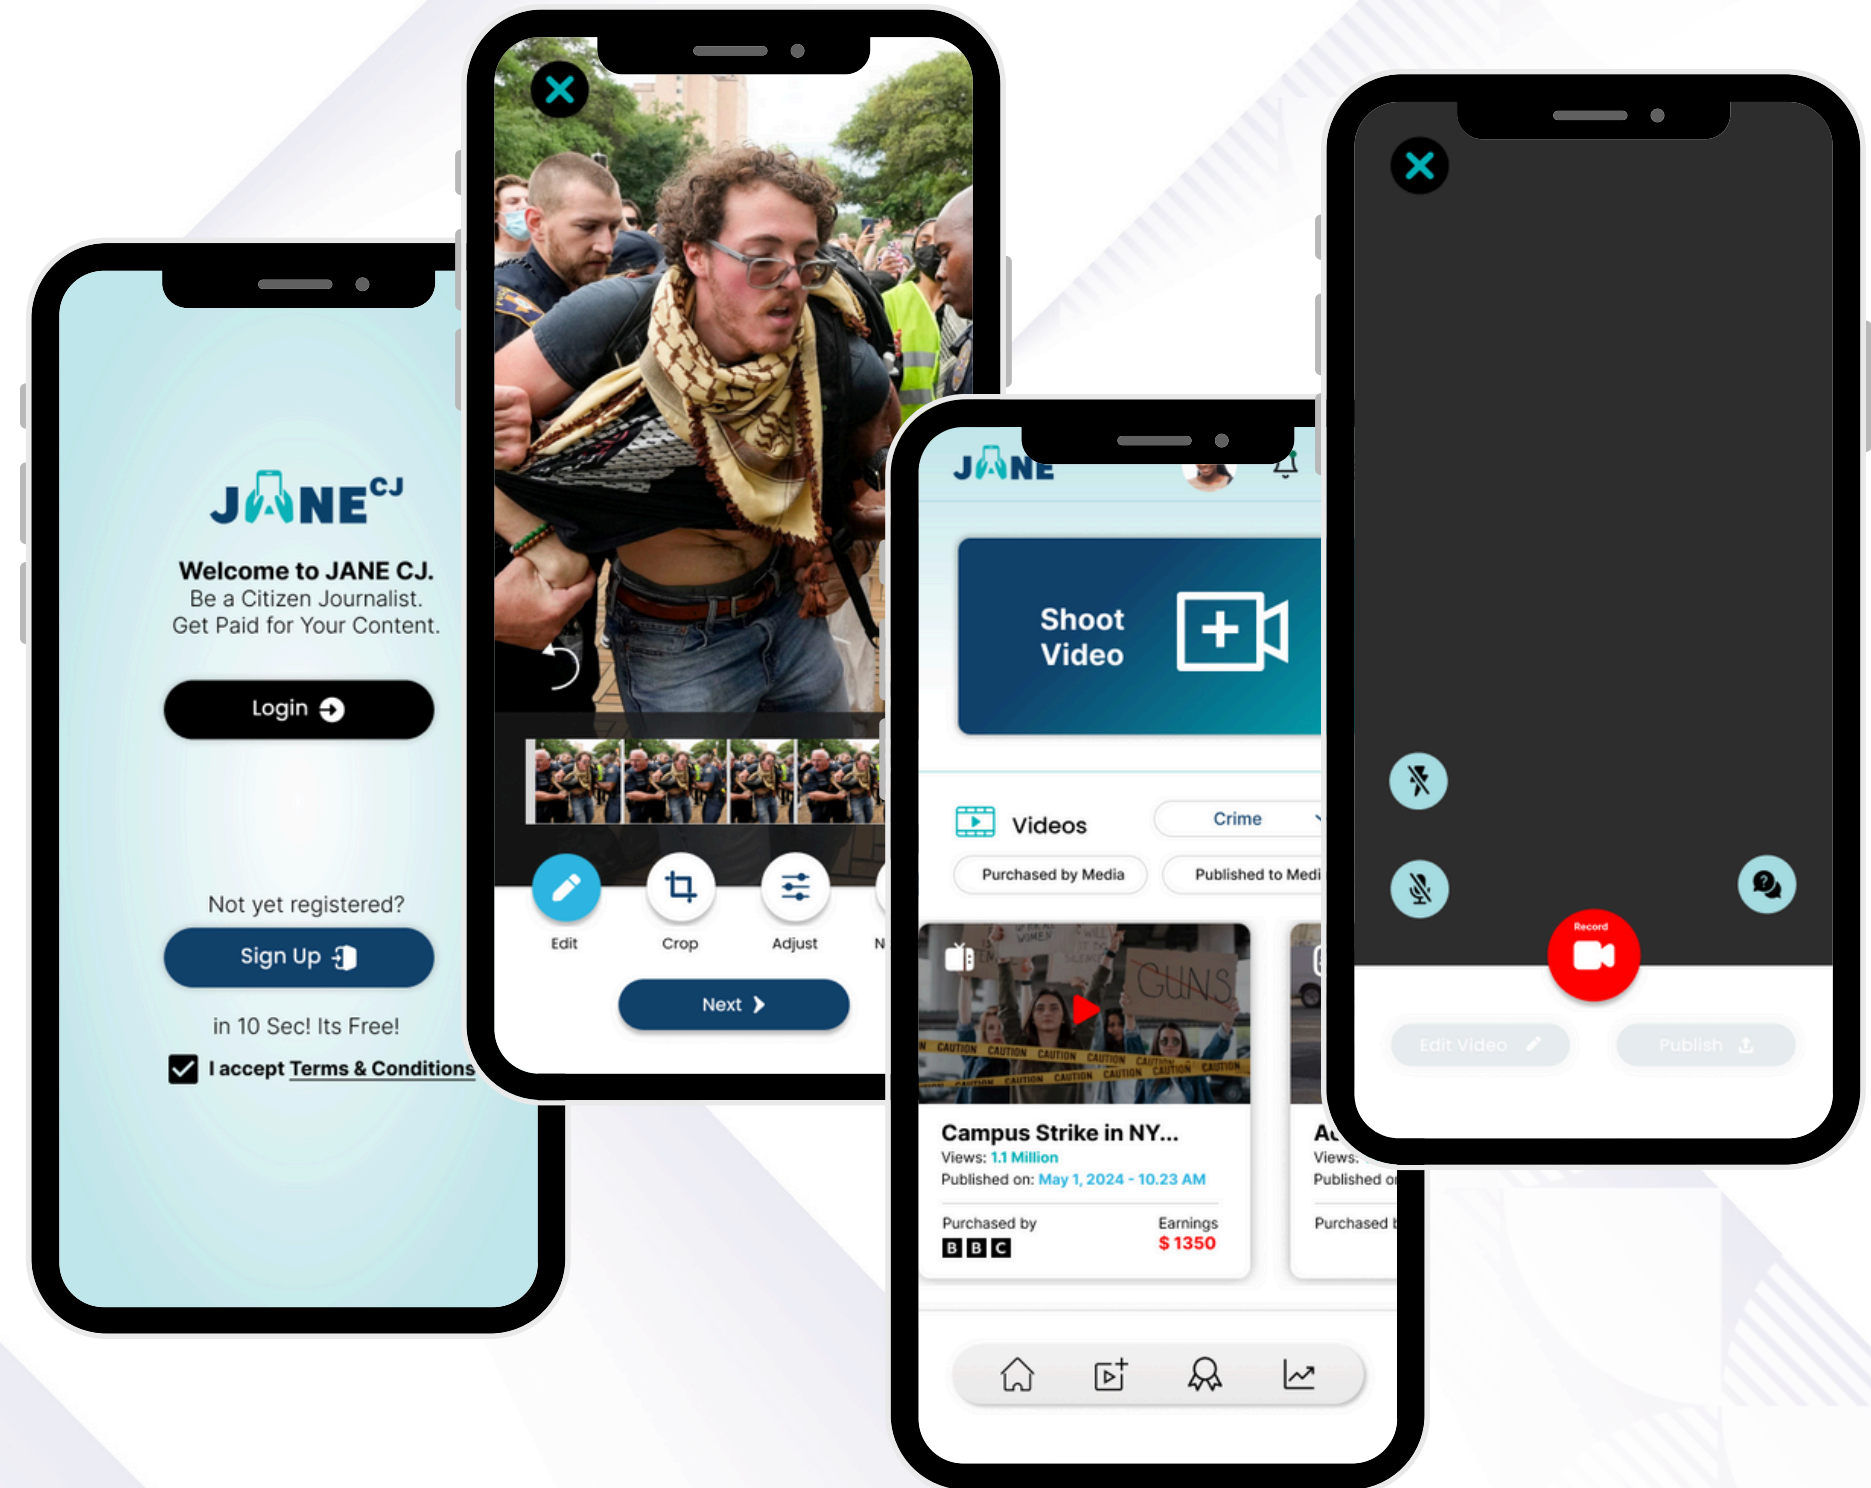

**JaneCJ is the modern one-stop platform for all your media creation needs!**

A video content streaming app with subscription management, Google/Apple login, and secure JWT-based authentication. Built using Flutter (frontend) and Firebase (backend) for both Android and iOS platforms. Features include role-based navigation, video management, and integrated payment gateways.

### Technologies Used:

- Frontend: Flutter
- Backend: Firebase, Firestore
- Authentication: Google Sign-In, Apple Sign-In, JWT
- Payment Integration: In-app Purchases, Stripe
- Navigation: Role-based navigation
- Platform: Android & iOS

Android & iOS

# Portfolio

Desktop App

## School ID Prime - Desktop App

This is a school management desktop app for schools to monitor students data and track their changes and other personalise info related to the students like ID cards generation, student details, updating their guardians image, etc. School ID desktop app boasts a sleek and intuitive user interface, ensuring all essential information and features are right at your fingertips.

This project involved

- Windows and macOS desktop app design and development.
- Tracking real time changes of students and performing CRUD operation.
- Managing and controlling multi level access with different user rights.
- Downloading and updating students data through excel sheet.
- Designing custom ID card for school and tracking status.
- Developing all other school admin controls through desktop app

# Portfolio

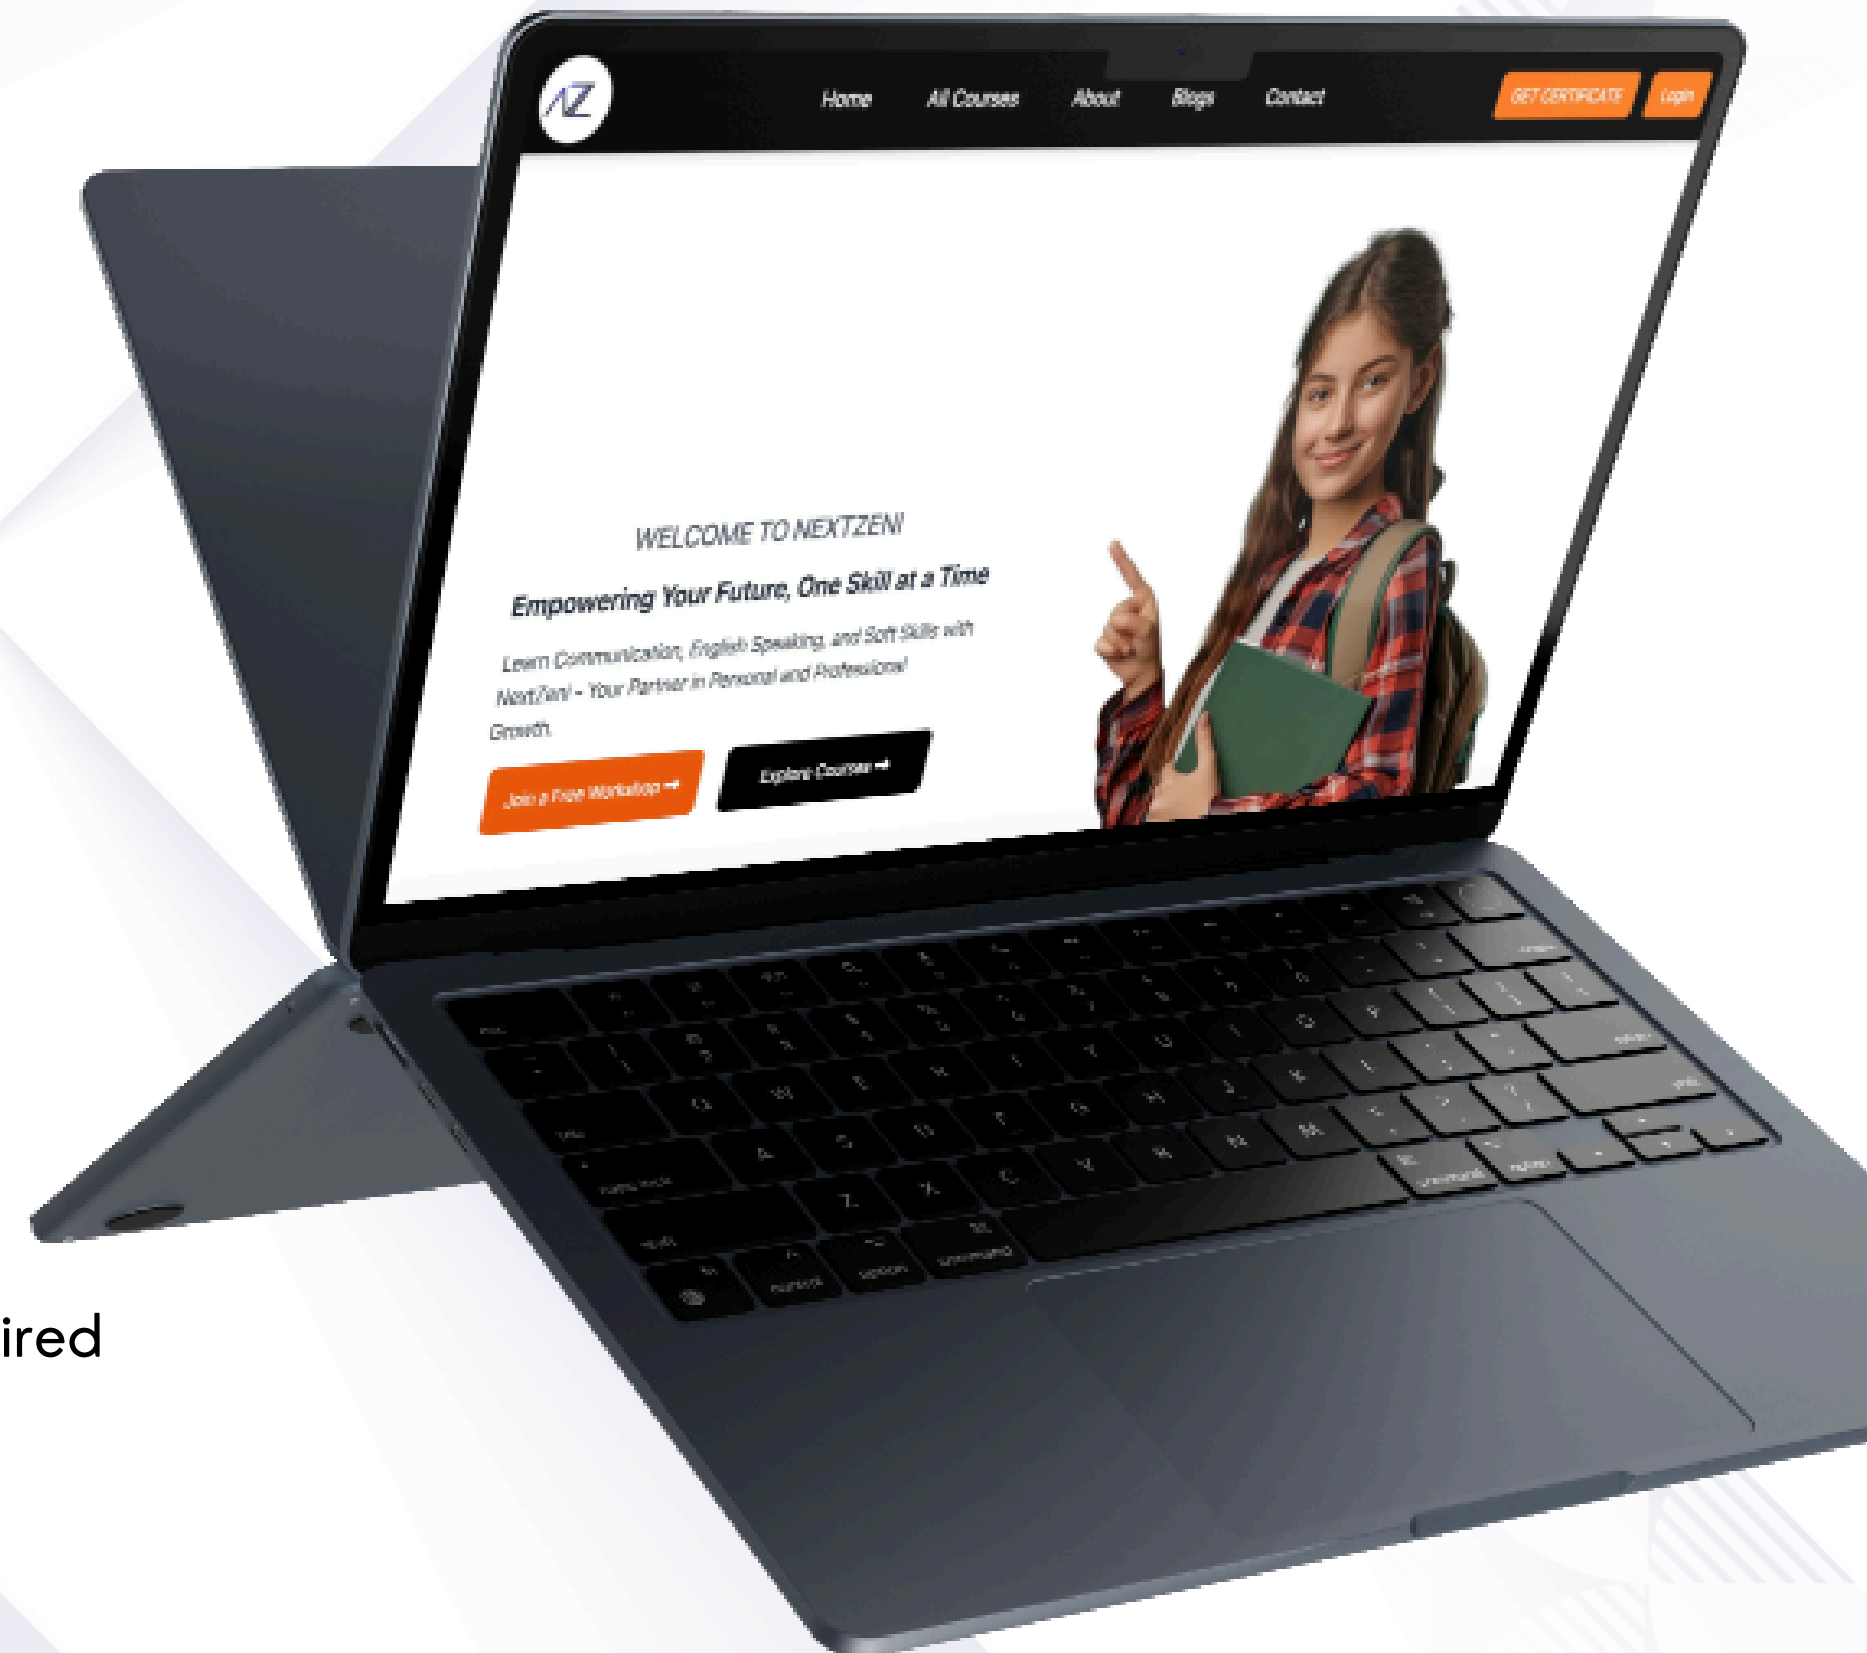

Web App / ML

## Automatic Crime Detector

Crime Detector App is a Django ML based project for crime detection through web cam input/uploading a video, using ultralytics, and the models are trained with open source data set. The detected anomalies are then emailed instantly with while capturing the anomaly and time at which it was detected. It was developed for a client from middle east to instal it over his system and can be access from anywhere online.

This project involved

- Web App & logo design .
- Website development & model training for specific use case.
- Capturing real time data footage and analysing each frame on trained model.
- Capturing and mailing detected anomaly in real time.
- Anomaly detection accuracy above 82%, before delivery acquired 95.1%

## Portfolio

### Difwa: Refill & Water Supply

#### Reliable Drinking Water Delivery App in Lucknow

At Difwa, we make safe and hygienic drinking water easily accessible across Lucknow. Choose from trusted local suppliers or top water brands and get cans delivered right to your doorstep with just a few taps. Our mission is to ensure every household in Lucknow stays healthy and hydrated through fast, hassle-free, and quality-focused water delivery services.

#### This project involved
